

# THE INTERNATIONAL ASSOCIATION OF PUBLIC TRANSPORT

# OUR VISION

A yellow train is moving from left to right across the foreground. In the background, there is a large, ornate building with two prominent towers, resembling a castle or a historical structure. The scene is set in an urban environment with other buildings and a street with cars visible in the distance. The lighting is bright, suggesting a sunny day.

We are working to **enhance quality of life** and economic well-being by supporting and promoting **sustainable transport** in **urban** areas worldwide

# A PASSIONATE CHAMPION OF SUSTAINABLE URBAN MOBILITY

**UITP AT A GLANCE**

# WHO WE ARE

We are the only **worldwide network** to bring together all public transport **stakeholders** and all sustainable transport **modes**.

# WHAT WE DO

## ADVOCACY

We engage with **decision makers** and key **international organisations** to promote sustainable mobility solutions.

## KNOWLEDGE

We inspire **excellence** and innovation by generating cutting-edge **knowledge** and expertise.

## NETWORKING

We bring people together to **exchange** ideas, find solutions and forge **partnerships**.

# CONCRETELY...

We release **publications** & **statistics**

We lead **knowledge** and **innovation** via Committees and projects

We organise **events**, bringing together the public transport community

We deliver **training sessions**

We safeguard and promote our sector and the **benefits of public transport**

We **advocate** with and for our members

...and much more!

“UITP is the only international association of its kind, bringing together **all players with a vested interest in advancing sustainable urban mobility**. With the knowledge and expertise our members bring to the table, **together we are able to consider the challenges and the opportunities public transport faces.**”

**Renée Amilcar,**  
UITP President

General Manager, OC TRANSPO  
Transit Services Department  
City of Ottawa

# INTRODUCING OUR PEOPLE FIRST VISION

- UITP's strategy 2023-2027 is inspired by the **People First vision** and objectives to:
  - Ensure the wellbeing of the staff
  - Provide members with a personalised experience
  - Improve and ensure the financial sustainability of the association on the long term

# OUR STRATEGIC PRIORITIES

# OUR CONTEXT

- **Ridership** is recovering at different paces around the world
- **Labour shortage** is a critical challenge
- **Electrification** is a global trend, but the supply chain experiences challenges
- **Digital applications** are deployed at multiple levels: operations, maintenance, payments, apps, etc.
- The **shared mobility** market continues to grow
- Growing policies for **demand management** and access restriction for cars
- Deployment of **national ticketing systems** is increasingly implemented or considered
- Massive **urban rail** projects ongoing in many countries and **BRT** systems in emerging/developing countries
- Growing **operating costs** vs. stagnating/decreasing revenues
- **Large events** are an opportunity to develop public transport
- Increasing needs for **capacity building**

# 2023-2025 TOPICS & PRIORITIES

Addressing the transformation of the labour market

Public transport business models

Transition to Net Zero

Redefining public transport

Digital Transformation

**Promoting women in public transport** and **engaging with women** in the promotion of public transport and decarbonisation

Key Trends

Priorities

# PUBLICATIONS & STATISTICS

We collaborate with our members to produce publications and statistics on a wide range of topics.

Datasets can be used for benchmarking or market analysis.

### INTRODUCTION

For many years, a significant proportion of public transport operations have relied on polluting fossil fuels. However, public transport is an essential means of travel and is already partially powered by electricity, positioning the sector as a potential provider of sustainable transport. In order to maintain this leadership role and take steps to reduce the burden of reducing emissions, the sector is currently decarbonising its activities. This includes switching to sustainable energy sources. This includes the electrification of vehicle fleets (including buses, trams, trolleybuses, and metros) and moving fleets powered by other alternative energy sources, such as hydrogen or biofuels.

For the sector to achieve this transition, it must meet its decarbonisation objectives, which in turn require access to green and renewable energy sources. This requires the energy supply for existing fleets managed by public transport operators to be ignored in favour of CO<sub>2</sub> emissions.

For cities in search of achieving their Green and Sustainable Development Goals, deploying clean public transport systems and encouraging public transport is the key. The leverage for other city service providers is to invest in local economy and energy in the health of citizens.

These Action Points offer full energy transition to the while unlocking other benefits.

## BETTER URBAN MOBILITY

Playbook

### INTRODUCTION

Tram and light rail systems (both defined as Light Rail Transit or LRT, in this Study) represent the most widely used rail-based solution for urban mobility at the global level. LRT systems can have different purposes dependent on the situation, providing the backbone of the public transport system in small and medium-sized towns, or acting as additional lines in support of the metro system in larger cities.

In this publication, exhaustive worldwide data for the 15 indicators covering operational and infrastructural aspects of LRT have been collected and analysed and aggregated per region. This Statistics Brief of UTPP statistics published in 2019, showing how the LRT worldwide panorama has changed over the last five years and, in particular, how COVID-19 had impacted this mode of public transport.

Figure 1: Distribution of cities operating LRT systems around the world

# SAMPLE DATASETS FOR BENCHMARKING

## Covid-19 ridership evolution

### STIB-MIVB, BRUSSELS, BELGIUM

\*Reference period - 3 weeks before Carnival holiday (i.e. end of January 2020). During the summer period, normal ridership is at approximately 70% of this value

## Passengers per year per region
