Policy Update - Modelling Tool

AMO is pleased to share a new [modelling tool](#), developed by Oxford Economics, to assist municipalities in estimating tariff costs on capital construction projects.

This tool was developed through close consultation with municipal public works department heads and treasurers, incorporating their valuable feedback.

When used alongside our recently released [report](#) on the impacts of tariffs on municipal construction costs, this tool will enable municipalities to:

- Better inform council decisions on capital projects;
- Understand and explain price fluctuations; and,
- Support procurement negotiations with vendors.

To support municipal use of the tool, Oxford Economics has developed a supplemental [guide](#) and a [video tutorial](#) to help your teams get started.

An online version of this Policy Update is available on the [AMO Website](#).
